The Charter of PCY

We, the members of the Peace Conference of Youth, resolve to work together in a spirit of unity and solidarity, to fully take advantage of the opportunity to share knowledge and ideas with all other members, to include all members in supportive dialogue, to maintain an outlook of open-mindedness,flexibility, and eagerness to listen to others, to approach our fellows with respect and empathy, embracing both differences and compromise, and to act with confidence,optimism, initiative, and responsibility. We commit as individuals to active participation in the PCY community, to sharing our experiences and values with our communities and around the world, and to continuing the work of peace-building and open dialogue.

We pledge to protect and promote human rights, devoting our attention to the specific issues we currently find most serious in the world:

- a.Conflict and Weapons
- b.Conflict and Weapons
- c.Environment
- d.Governance
- e.Health
- f.Rights of the Vulnerable

To address these issues in the pursuit of world peace, we resolve to enhance open dialogue in the spirit of mutual understanding, tolerance, and cooperation; improve access to and quality of both formal and informal education, informed by a dedication to the development of personality and self-actualization; support job creation and vocational training; enhance participation in society of the underrepresented and disadvantaged; coordinate efforts in order to use resources responsibly and avoid redundancy; incentivize social responsibility and environmental consciousness of all actors, including individuals, civil society, corporations, and governments; develop and invest in innovative and sustainable technologies; and initiate and support efforts toward the prevention and resolution of armed conflicts.

We will forge a partnership between alumni and future conference participants, and develop and expand forums of communication for the realization and enrichment of a cohesive community. We empower ourselves to be leaders in the furtherance of our values, at all levels of society, motivating and organizing others to advocate and act alongside us in our pursuit of peace.

PCY in 2018

- Theme of this fiscal year -

TRUE HEART FOR NEXT INNOVATION

～Let's create the next innovation with an obedient heart～

Access to health care services by people living in developing countries has improved in recent years, but the disparities between social classes are becoming more prominent. According to the World Health Organization (WHO), around 150 million people in the world are forced to pay the medical expenses that households will collapse, of which 100 million people are living below the poverty line I will. Social security expenditures are expanding year by year in Japan, and it is expected that the social security system including the nationwide insurance system will become more difficult to sustainably manage in the future as the population structure changes, such as a declining birthrate and an aging population It will be. To solve the challenges facing such a world, we must also listen to different opinions and have a generous mind to accept it. By considering other people with an obedient heart and cooperating with the problem solving in the world, we believe that the chain of life that has continued peace and continues to

- Action aimed for this year -

Focus on global health care issues and build a mechanism to solve problems.

From 17 SDGs targets, this year we will prepare recommendations for Goal 3 health and medical field. Even at the Osaka Expo, which aims to attract 2025, "diverse, physical and mental and healthy way of living" is cited as a sub-theme, and it is drawing attention to think about each and every healthy way of living. "Healthy way of living" is defined as "a state that is all satisfied physically, mentally and socially" as WHO defines. The vulnerability of the health system to provide adequate insurance medical services in developing countries can not prevent the spread of infectious diseases and it is an obstacle to UHC realization. Improvement and prevention of lifestyle habits is inadequate, and deaths from non-infectious diseases (NCD) are increasing in all developing countries. There are also health problems such as tightness of medical finance and obesity also in developed countries. Health and medical issues can be said to be one of the most important themes in realizing a sustainable world.

In the 2018 PCY project, by thinking about how to secure the healthy living of people and promote welfare from a global perspective, we will approach the goal of SDGs and also develop the health and sanitation prescribed in the world peace charter We will create innovative leaders to solve problems and contribute to world peace.

Process to implementation

1 The spirit of the charter

Based on the spirit of The Charter of PCY (World Student Peace Charter), the PCY program of 2018 set health and welfare as a subject.

2 PCY 2018 Selection of participating members

In the Kansai university / graduate school, past year PCY fellow, business announcement to various organizations, invitation to participate, 20 highly-conscious Japanese students were selected.

3 PCY opening ceremony

In the PCY opening ceremony, we invited Ai Ohara (Senior Manager, Japan Innovation Network) who served as a consultant at the UN SDGs Young Leader Ranier Mallol (President of AIME) and former UNDP Japan representative office. I learned about actions and technological innovation toward the specific goals of SDGs.

4 PCY Virtual conference

In the PCY virtual conference, students in five countries, SDGs Goal 3: Discussion on the problem solving action plan on health and welfare issues.

5 PCY Overseas program

In the PCY overseas program, we visited the electronic national Estonia and the welfare state Finland and visited the local government facilities, companies, universities, etc. In addition, we held a workshop on SDGs goal 3: health and welfare issues with local students.

6 PCY training camp program

In the training camp program, Japanese students including foreign students SDGs Goal 3: We have created three action plans on health and welfare issues.

7 SDGs × PCY Forum 2018 Announcement at

We presented three action plans created at the training camp at the public forum for citizens.

Concept · Program composition

Theme：TRUE HEART FOR NEXT INNOVATION～Let's create the next innovation with an obedient heart～

① **Purpose sharing of PCY**

Understand the basic philosophy of The Charter of PCY ", concrete discussion on what challenges should be cleared for realization, and also discuss the subject of PCY in 2018 TRUE HEART FOR NEXT INNOVATION ~ I want to create the next innovation with an obedient mind ~ I shared the meaning of being included in ~, the significance of making health and welfare issues a challenge for this fiscal year.

② **Interested in the inherited spirituality**

By thinking about "honest heart", we invited the inherent spirituality of the Japanese who has been inherited from the potentially possessing past as a Japanese.

③ **Be willing to explore the way people are behind technological innovation**

We raised the desire to explore the way of happy people who bring rich in both materially and spiritually by listening to the stories of the UN SDGs Young Leaders and former UN officials.

④ **Understand the values of the people who will create the next generation**

By conducting virtual conferences with students from five countries and visiting IT technology and welfare developed countries, values are influenced by the environment that has been brought up and are different from each other with personality I had you understand.

⑤ **Have a spirit to extend an obedient heart to the world**

SDGs with international students in Japan Goal 3: Have a sense of mission to expand the spirituality of compassionate things to do to the world with the honest heart that the Japanese have, by deepening the discussion about health and welfare issues It was.

⑥ **Realize the future that brings richness both materially and spiritually**

Based on the programs so far, SDGs Goal 3: By presenting action plans on health and welfare issues at the Forum for the general public, the true progress and harmony of mankind from collaboration that echoes the thought that contributes to the future of the people It was sublimated into action power to realize.

Greeting from the president

JCI Osaka President
TETSUNOSUKE　TAKEDA

For the purpose of realizing permanent world peace, Peace Conference of Youth（PCY）, which started the project from 2010, has also been held for the eighth this year.

We would like to express our gratitude to you for reporting that we were able to finish the program with the understanding and cooperation of many educational institutions, companies and organizations this year.

This fiscal year, our Osaka Youth Council has been developing activities to realize “BREAK THROUGH OSAKA” that brings “true progress and harmony to humanity” with the next innovation.

“The true progress and harmony of mankind” = “The world in which everyone can pursue happiness in substance and spirit” realizes the world of Japanese who accepts everything without being caught in anything It is necessary to cultivate the “penetrating human resources” that will create the next innovation.

To the students who participated, set a theme leading to world peace from the SDGs (sustainable development goal) promoted by the United Nations, and repeatedly discuss the controversy with new colleagues around the world to deepen mutual understanding Inside, we both offered the opportunity to grow to “a penetrating human resource”.

We invited one of the 17 UN Young Leaders from around the world in April invited one of the UN Young Leaders to conduct a PCY opening ceremony and conduct a virtual conference with overseas students at the same time to join the four continents in June It was.

In August we held an overseas program for IT advanced country Estonia, in September we held the SDGs × PCY Forum at BREAK THROUGH OSAKA 2018 EXPO with PCY main program with domestic international students.

Completion of all programs, students who became PCY fellows are tied together with deep trust, creating “new value” that brings better change in the world, and as a penetrating human resource that brings true progress and harmony to humanity I sincerely hope that you will be active.

JCI Osaka
The 68th president
TETSUNOSUKE　TAKEDA

Greeting from the chairman

HIRONORI YAMOTO

PCY 2018 aims to produce unexpected human resources who bring true progress and harmony to human beings, with a program for students from all over the world to formulate a problem-solving action plan on health welfare issues I did it.

To solve the challenges facing the world, we must have a liberal mind to listen and accept different opinions while holding concern about the spirituality that has been handed down. We believe that a sustainable world will be realized in which mutual understanding is born, cooperating in solving the problems of the world with an obedient heart, sustaining peace and succeeding in the better form to the next generation . So, the theme of this fiscal year was “Let’s create the next innovation with an obedient heart~ TRUE HEART FOR NEXT INNOVATION ~”.

First of all, in order to have a goal image of “a penetrating human resource”, I gave a lecture by UN Young Leaders, who is promoting the achievement of SDGs, the UN sustainable development objective, and clarified the goal image of the program.

In addition, we will carry out PCY Virtual Conference with students from five countries including Japan to understand the values of people who will create next generation, with the willingness to explore the way people are behind technological innovation Did. Also, in order to get a better understanding of the background of the problem, we conducted an overseas program to visit Finland in welfare developed countries and Estonia called electronic nation.

Finally, with the international students, we held PCY projects and forums as an opportunity to discuss the problems of the world deeply and explore solutions. We announced an action plan created by students from the viewpoint of world peace in front of citizens.

I am sincerely thankful to Mr. Virgil Hawkins and Mr. Yanney who have been instructed with enthusiasm, hearty thanks to everyone at the counterpart.Moreover, I hope this student will make use of this opportunity to transform the world I sincerely hope that you will become a staffed person.

JCIOsaka　World Transformation Room

Mutual understanding establishmentCommittee Chairman

HIRONORI YAMOTO

Project introduction

01 Recruitment

By adding whether or not you are interested in the third phase of the United Nations “Young Leaders” as questions on recruitment, it will become a leader that will contribute to the realization of world peace and sustainable world (SDGs) in concrete terms I checked whether I am interested or interested. As a goal image from the recruitment stage, we aimed to raise the effect of exercise and nurture the personnel who passed through by being conscious of being a world leader and participating in the PCY project.

Project introduction

02 Opening ceremony of PCY2018

In the opening ceremony of PCY 2018, AIME has developed a tool to predict the occurrence of major diseases using artificial intelligence and epidemiological expertise and data analysis, selected as one of the Young Leaders contributing to the achievement of SDGs from the United Nations Co-founder and CEO Rainier Mallol invited Mr. Ai Aihara of Japan Innovation Network, who is focused on activities to achieve SDGs in business, and keynote speeches.

In the opening ceremony, after listening to the keynote speech with the Osaka Transformation School of Human Resources Development Program for social workers, we deepen mutual understanding of SDGs which is the theme of PCY this year in SDGs card game, and divided them into 5 teams We did team building.
After the keynote lecture, I was able to feel that the consciousness about the future career such as the question to the lecturer and asking the students to consult is enhanced.

Project introduction

Keynote lecture - Introduction of lecturer -

AIME

Dear co-founder and CEO Rainier Mallol

Born from the Dominican Republic. 25 years old.
One of 17 UN Young Leaders elected from more than 18,000 nominations. It demonstrates excellent leadership to achieve SDGs. Using epidemiology, large-scale data analysis, artificial intelligence, AIME developed a tool to predict the time and place of infection in real time. We are also considering how we can apply the model to the expansion of HIV, tuberculosis, malaria and other neglected tropical diseases to support sustainable development goal 3.

Japan Innovation Network

Senior Manager Ai Obara

Master of Development Administration from the University of Western Michigan.We consider the “sustainable development targets” (SDGs) launched with the United Nations Development Program (UNDP) as an opportunity for innovation to explore the challenges of developing countries and business models to solve them in business In charge of planning, construction and management of “SHIP” innovation platform aimed at building a network.

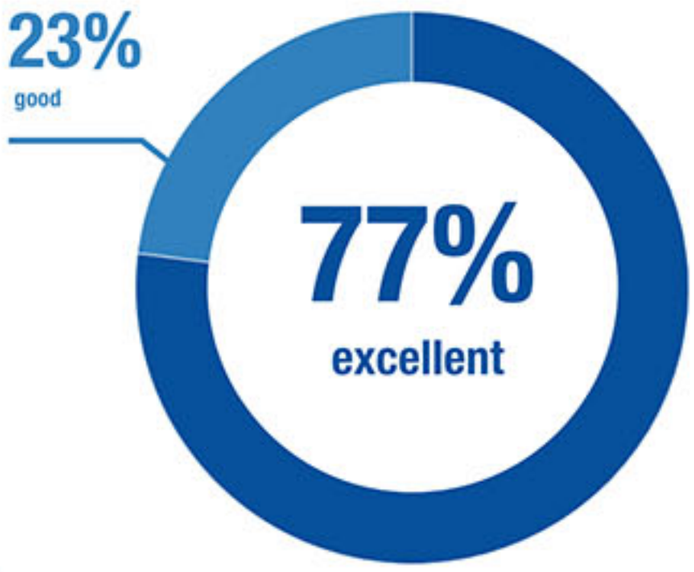

In 1992 he joined Nomura Research Institute (NRI) as Regional Planning Research Department as a researcher. On the way, he was in charge of food assistance such as Angola, Botswana, etc. for two years at the United Nations World Food Program (WFP) as the Ministry of Foreign Affairs JPO. In addition, he is dispatched to the Association of Corporate Executives and is involved in making recommendations on “New Japan”. After working for the 2007 CSR Promotion Division and 2009 Public Relations Division Manager, he retired from NRI who worked for 19 years. As a consultant for private collaboration at UNDP’s representative office in Japan from 2012 to 2016, he is engaged in promoting collaboration with private enterprises contributing to developing country development.

Project introduction

- Questionnaire result after PCY opening ceremony -

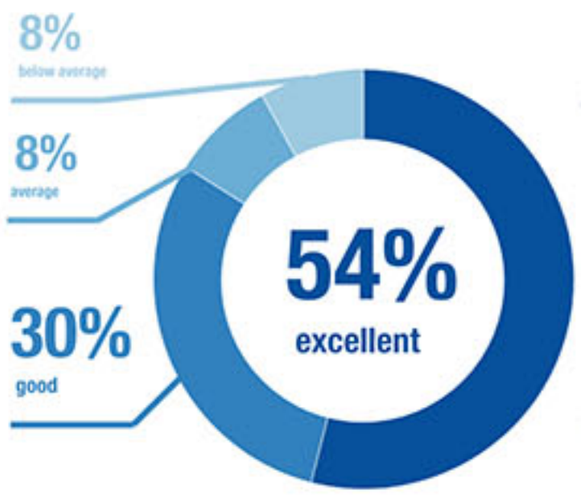

In the opening ceremony of PCY 2018, the purpose was to raise awareness as a young leader through keynote lectures and group work. In the questionnaire after implementation, results showing changes in students' consciousness were obtained. Also, in the free response part, there were many opinions about having been able to see the current self as objective, knowing the problems the current world has and taking the initiative to take action.

1 Have you participated in this program and did you feel the need for young people themselves to act at the forefront towards a sustainable future?

- Through Mr. Raniel's lecture, I thought that there are many young people seriously working toward the achievement of SDGs around the world, and I must also become a member of that.
- I was surrounded by excellent students and I felt my lack of ability.
- For SDGs, I wanted to find out what I could do for myself through PCY activities.

2 Through the program, did you feel that SDGs are closely related to the actual business and are familiar?

- When I played card games, I felt that SDGs are deeply involved in real business. For me, I thought that the card game really represents the correct answer of this world.
- In Mr. Ohara's lecture, I learned that companies are incorporating SDGs into CSR activities.
- I felt that SDGs are familiar, but I thought that it might be hard to say that it is closely related to the business that thinks "profitability" first.

3 Through the SDGs card game,Have you had the opportunity to know that your life is connected?

4 Through group work of SDGs card game,Have you deepened your relationship of trust with your friends?

Project introduction

03 Virtual Conference Preparation Program

- About the preparation program -

This year's PCY entitled 'Virtual Conference', Discussion on SDGs Goal 3 with PCY members using world students and skype. Present the peace inhibiting factors related to SDGs Goal 3 of each student's home country, share the problems of each country, have parties' consciousness about world problems, deepen mutual understanding.

In preparation for the virtual conference rehearsal on June 24 and the presentation on the day to be held on June 30, we held a virtual conference preparation program on May 12 at the Osaka Youth Conference Office secretariat.

- About implementation matters -

Director Nishihara, General Association of Japan Presentation Education Association, Dr. Ureshohara of Doshisha University, respectively, and input necessary knowledge at the virtual conference. In addition, the PCY members were divided into groups, and we were able to exchange opinions on the various issues of domestic SDGs Goal 3 that we think and deepen their understanding.

Project introduction

Keynote lecture - Introduction of lecturer -

Japan Presentation Education Association

Representative Director Takeshi Nishihara

He has a wide range of backgrounds, from actors, group managers of PR / IR support companies, directors of lecturer dispatching companies, entertainment to company management. When I was engaged in PR / IR support of listed company's new product launch party, account settlement explanation meeting, general shareholders meeting etc., I was keenly aware that the success or failure of the presentation will affect the "after" of companies and individuals. After learning lecturer work at a training company in Tokyo, he established an association independently. I assumed the position of Representative Director. It is active in companies, schools, educational institutions etc. throughout the country.

Doshisha University School of Commerce

Associate Professor Yuzuhara Yoko

We have experienced several private enterprises such as pharmaceutical manufacturers, from 2014 to Doshisha University.

The state consciousness was raised to the present state of Japan's organ transplant which is the lowest level in the world, how many people deepen the understanding of transplant medical treatment, feel the organ donation close to death, the intention indication of the organ supply is a common society I am doing research on whether it will become. Even though there are technologies that make people's wishes (human value) feasible, it is said that true "social innovation" will not occur unless the mechanism of the society that makes it feasible is developed, cross-cutting across various disciplines By "trans disciplinary" to reorganize and create new fields, we are exploring the mechanism of the society, returning the results to society, practicing oneself based on the results, and focusing on solving social problems ing.

Project introduction

04 Virtual conference rehearsal

Following the preparation program in the preceding paragraph, we conducted a virtual conference rehearsal on June 24 at the Osaka Innovation Hub. PCY members were divided into 5 groups, ① UHC ② lonely death ③ correspondence to an aging society ④ TB 5 ⑤ We gave a presentation on the theme of suicide.

In this program, students also participated in the selection of the group to announce on the day of the virtual conference and decided on the presentation group on the day.

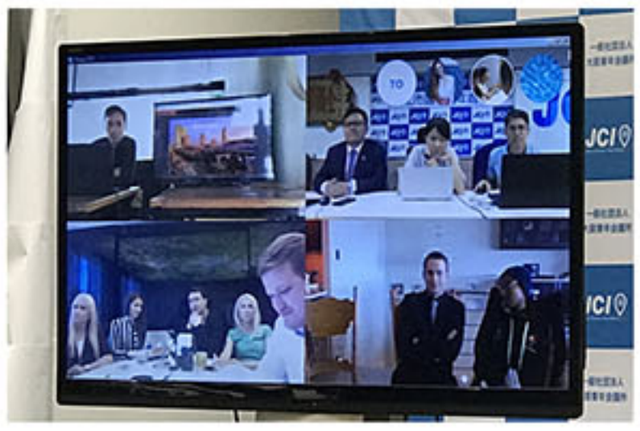

Project introduction

05 Virtual conference

On June 30, we held a virtual conference at Kansai University Umeda campus. As a keynote lecture, Mr. Virgil Hawkins of Osaka University graduate lecture received a lecture. After that, students from Japan, Taiwan, Thailand, Estonia and South Africa conducted presentations on their respective home countries' SDGs 3 and exchanged opinions.

The virtual conference is a program aimed at raising the motivation for participation in overseas programs and PCY main body projects at the same time not only knowing the background of social problems of other countries more effectively by making a conference with the same generation students using Skype The we. As a result, seeing overseas student presentations and interactions among students from other countries, the motivation of Japanese students has also increased, and when jumping abroad it is not the first time to meet but the joy begins to naturally like when we meet again There was also a side effect of.

Project introduction

Professor Virgil HAWKINS (Osaka University) Keynote Speech

According to the research announcement of WHO, heart disease, cerebral infarction, cancer (average life expectancy 81 years old) can be mentioned in high-income countries as threatening healthy living. In low-income countries, respiratory diseases, HIV / AIDS, diarrheal disease (average life expectancy 59 years old) has become. The problem is not solved even pursuing only medical solution. For a healthy life, it is a health problem that intertwines the poverty problem, family problem, medicine, and complex elements of nutritional problems. Also, first of all, it is important not to choose an action plan that will not hurt anyone, threaten peace. There is a reality that the income of 42 rich people in the world is the same as the income of the lower 3.7 billion people, rich people rise more and more. On the other hand, biased international press is also a problem. The three major newspapers in Japan have reported that there are reality that articles on MERS, Jika virus, Ebola virus account for half of the total number of articles. I would like you to realize that there is a problem of bias in this report. I would like to realize that the health problem is also closely related to the problems of the world. There are issues of Africa that create innovation about African issues and are leading the solution. Those that threaten health problems, for example, recognize the problem of exploitation and increase more fair trade. It is important to take care of equality and aid feelings.

- Students from Japan, Estonia, Taiwan, Thailand and South Africa Presentation on SDGs Goal 3 of each home country -

Each country presentation included the background of the country, the introduction of culture and history, and brought PCY members understanding about different cultures and consciousness of parties. We can not understand by just looking at the target of SDGs 3, the proposal of peace inhibiting factors and solutions of each country has led to the following overseas program, Peace Conference Forum.

Project introduction

presentation Japan

Theme：Universal Health Coverage For all

About Universal Health Coverage By summarizing the circumstances of the countries around the world and the situation of participating countries of the virtual conference this summer, using non-face-to-face questions using the application, everyone clears problems such as poverty and ignorance, I proposed a way to live a life.

presentation Taiwan

Theme：Taiwan's National Health Insurance

Regarding the national health insurance system, we surveyed the history of national and national health insurance in Taiwan, and proposed a mechanism for higher accessibility using a cloud system in the future with a highly satisfying system.

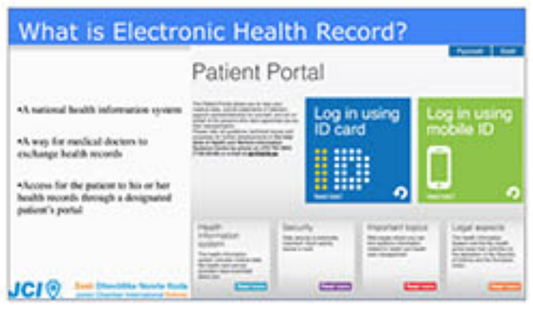

Project introduction

presentation Estonia

Theme：Problems and solution in the field of SDG3

In Estonia, the coverage ratio is over 90%, but there are three health and welfare issues: alcohol poisoning, tobacco and HIV. And we made a proposal that there is a system to be able to solve inefficient hospital management, etc, because there is E - health system in Estonia.

presentation Thailand

Theme：NCDs Diseases（Road Accident）

Thailand's health and welfare issues include cancer, diabetes and heart disease, but there is a traffic accident as a problem directly linked to the mortality rate. As a solution, in the short term, by setting up a drive recorder, we proposed reducing traffic accidents, increasing children who are interested in health for a long term, infrastructure development, etc.

Project introduction

presentation

Republic of South Africa

Theme：SDG s 3 in Republic of South Africa

There is apartheid as the historical background of South Africa. On that basis, as a solution to the health and welfare problem, we proposed a way to advance medical experts in South Africa program called Ubunz, to promote social education, public and private unity, African issues to be solved in African way .

- Impressions from students / stakeholders after participating in virtual conference -

Republic of South Africa

My apologies for the running startup from our side.
Eventually, I think, everything went well.
My students enjoyed it tremendously.
We had a very interesting discussion over coffee after the conference. This was a great opportunity to broaden their horizons.
Keep us in the loop for any future endeavours like this.

Abel Esterhuyse

台湾

It was an honor that I could represent PCY Taipei to join this conference. In this meeting, I not only had an overview of each countries' national health insurance program, but also had a feedback of how other people think about our medical system. For example, Russian team were interesting about the Traditional Chinese Medical Care in Asia, and how do we take care of the tradeoff between individual's privacy and efficiency of management.

Project introduction

I appreciate about this opportunity to exchange ideas with people from various countries, but I think if the topic could be more ordinary, for example, the best music, sports, or arts in different countries; or any topic that we could put our new knowledge

Participating students

Estonia

the feedback: I think it was well organised. It was also on a suitable time for Estonia (saturday and started in the morning). It was interesting to hear about other countries and their healthcare system and problems. Sometimes it was a bit hard to hear people when the connection was bad, but otherwise it was good. I wish we could have done maybe a small group work between countries.

Va Nessa(Estonia)

Thailand

Regarding the problem of each country, I thought that direct communication by local people using Skype has reality rather than looking at letters, and I think that Japanese young people can also be felt as a more familiar problem. However, I thought that not only doing presentations, but also the interviews and videos of interviews that show the situation of the local area would make it easier to image more. Knowing even the slightest poverty situation of the partner country even through Through Skype will also be for the mutual countries, and as young people looking for something they can do may also come out, we I think that it will become a better world by supporting more. What I was worried about was someone who was actively participating in the audience and there was some passive people so even if there is a difference in personality they are all participating, so everybody is something I wish I could tell others my opinion. After all, by having international exchange, various possibilities are born, and looking at the way everyone speaks lively, the future has been a lot of fun. I think that the country where poverty is now a problem improves little by little, and even myself and a small thing became an opportunity to think about what can be done.

Yuki Samamoto(Thai)

Project introduction

06 Overseas program

- To Estonia and Finland -

The moment where you feel the history and culture of your country is the time when you leave Japan and touched a different culture in a foreign land.
This year's PCY program will provide overseas visits and discussions based on the themes of overseas students and their national culture and SDGs on the site so that they will cross the differences of countries and cultures and create a circle of mutual understanding leading to world peace It was an opportunity to spread.
Mission is to create personnel who understand the values of the people who will create the next generation while holding the willingness to explore the way people are behind the technological innovation and from the 30th July to 4th August itinerary Overseas program was implemented.

As a place to experience the technological innovation which is the theme of this year, Estonia which is one of the most advanced e-government and start-up place as a place to experience, based on SDGs Goal 3 "Health and Welfare", is one of the world's welfare state I chose Scandinavia / Finland.

Project introduction

- Estonia -

【First day:July 30】

On the first day, it was a direct flight from Kansai International Airport to Helsinki Vantaa Airport with about 9 hours of air travel. During the flight, students had a challenge to listen to Scandinavian movies and Finnish music to deepen their understanding of Northern European culture. After that, take the bus from the airport to the Helsinki Cathedral. I enjoyed sightseeing somewhere before the training I will start from now. It was a pleasant beginning with wonderful weather and beautiful scenery.

From Helsinki Port to the ferry “STAR”, to Tallinn, the capital of Estonia. Inside the ship, while eating Burger King which is a hot dish, I exchanged opinions on three topics of P, C and Y regarding various topics such as movies, Finland culture and expectations for this trip on the cabin.

And because we arrived at the accommodation ’s Metropol hotel was 22 o’clock (4:00 pm Japan time), we returned to the room early.

e-Estonia

We visited the e-Estonia showroom, a government facility in Estonia that realized the digital society. Here, politicians and business people come to visit not only from Japan but from the world. Students also learned and experienced Estonia’s cutting-edge initiatives.

【the 2nd day:July 31】

Set in Tallinn, the capital city of Estonia, I visited financial institutions that are exploring the old city streets, government facilities, startup support.

(Walking around Tallinn city)

In the morning we carried out a walk program in the city of Tallinn, which is also registered as a World Heritage Site, with students from Estonia and members of JCI Estonia. With the guidance of students from Estonia, we were able to exchange opinions on history and culture, mainly in the monuments built to commemorate the 100th anniversary of independence, Estonian parliamentary proceedings, consular offices of various countries and so on. For lunch, we got a lunch for Estonian students recommended, and we moved to the program in the afternoon.

(Visit to SEB Bank)

At SEB Bank, I learned how to create innovation. SEB Bank has conducted numerous workshops and presentations to foster start-up companies and create enterprise innovation, and also learned about the situation such as entrepreneurship education of Estonian students of the same generation.

(A dinner party)

On the second day I finished with an exchange dinner with Estonian students at the end. I got an opportunity to exchange opinions in various ways and to think about the way people who are behind technological innovation are.

Project introduction

【Third day:August 1】

(Visit to Skype)

We visited Skype Technology, a startup company from Estonia. We learned about the history of Skype and active questions such as about 10 years from students and how Estonia works. In addition, I learned that Skype has triggered various start-up companies. Inside the office is colorful and artistic environment, Japanese corporate office saw different atmosphere feeling.

(Lecture and workshop at Mektory)

We went to see the laboratory at Mectory Tallinn Institute of Technology. There are rooms tailored to various research themes, such as Japanese room, American space, Indian room, Australia room, German room, etc. referring to national culture, sauna and pool, laboratory of dance hall, energy laboratory There was a laboratory suitable for the purpose.
Also, many companies are receiving sponsorship, Marimekko (Marimekko) rooms and so on.

After that, we received a presentation of world cleanup day which is the movement from Estonia.
We learned the importance of feeling passion and acting which was an exercise spreading from 150 countries to Estonia with a population of 1.3 million people.
Then, we had a facilitation at JCI Estonia 's Henry' s head, and Estonian students and Japanese students were mixed to discuss and share the issues and problems of both Japan and Estonia with regard to SDGs Goal 3. It was an opportunity to deepen awareness of the differences between the students who will be responsible for the next generation, values and ways of thinking.

Then I went to Finland.

Project introduction

- Finland -

【4日目August 2】

(Visit to ISO OMENA)

We visited ISO OMENA in Espo - city next to Helsinki City. With a new initiative in Espoo, it is a complex of shopping malls and administrative welfare facilities. In the local guide, I got an invitation from Mr. Tomomi Antillinen who is also studying welfare, and watched KELA, Neubora, a hospital and a library which are installed together, and learned the difference in medical welfare policies by country.

(Workshop at LAPINLAHTI)

From the afternoon we held a lecture & workshop at a multipurpose facility such as a cafe that leaves the tidal at the former mental hospital LAPINLAHTI. The former mental hospital is currently preserved as MENTAL MUSEUM, and after observing, I received a lecture on Japanese and Finnish universities and welfare circumstances from Mr. Hagino who is coming from Tohoku Welfare University to Laurea Applied Science University It was. After that, we divided into 5 groups, divided the theme, and carried out a workshop using the method of World Cafe. By discussing welfare with Finnish students and learning about culture and background, it became an opportunity to notice and understand the policies suitable for that country and the problems and problems each country has.

(Farewell Party at HOLIDAY)

On the last night of the overseas program, at the Finnish restaurant HOLIDAY near the coast, we looked back over the memories of the trip with Finnish students and discussed discussions on mutual culture and history.

(Visit to KELA)

We asked Finland 's social security system and child rearing support system etc at Finland' s Social Insurance Agency KELA headquarters. One of the allowances, the maternity package which I receive at the time of giving birth attracted the interest of the students. While viewing the real thing, we exchanged opinions with other KELA staff about other benefits etc.

Project introduction

【Day 5:August 3】

(Visit to Aalto University)

We visited Aalto University which is said to be a university of innovation creation.

The University of Aalto is a new university which was integrated by 2010 with three universities (Helsinki university of technology, Helsinki school of economics and the Helsinki university of art and design). Origin of the name is from the renowned Finnish architect Alvar Aalto representing the 20th century, and the building which he built is in the university. We invited local students to visit the premises and visited the field of higher education in Finland, which created innovation across various barriers of faculties. In addition to Aalto architecture, it was an opportunity to learn about history and think about the way of university.

(Helsinki city area working project)

While walking down the road from Helsinki Central Station to Helsinki Cathedral, it was an opportunity to think about Finnish history and culture by touching cobblestones and historic buildings and art objects.

Project introduction

In this PCY overseas program, we visited Estonia, the advanced technology and Finland, a welfare superpower, touched the cultures of both countries and exchanged opinions among students of the same generation. This will bring together the various values of the people who will create the future together, the history and technology, knowledge and experience will blend together, the PCY (Global Student Peace Conference) aims “to advance humanity and bring harmony to the world It was a program leading to the development of leaders.

Awarded in JCI Estonia National Convention

The program received the “best international cooporate award” and “best national president special award” at the JCI Estonia National Convention.

JCI Estonia Mr. Henry Unfold, President of 2018, as a reason for the award “At the virtual conference I was able to know the issues of each country through presentations from many countries. Also, the attempt by Estonian students and Japanese students to discuss issues of mutual countries at Tarin Institute of Technology MECTORY in Estonia is advanced and I hope that such efforts will be done elsewhere in the future as well. I got a comment.

Project introduction

07 PCY2018 [program content · schedule]

The training camp program aims to create talented persons who have a gentle mind to expand the world, SDGs Goal 3 “Maintaining a healthy life for all people of all ages and promoting welfare” Theme PCY members will create their respective action plans.

YOUNG LEADERS
SUSTAINABLE DEVELOPMENT GOALS

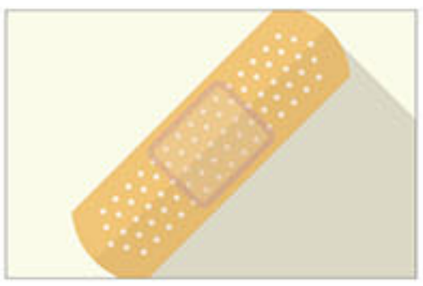

Interested in the United Nations Young Leader, a young man between the ages of 18 and 30 working on the sustainable development goals (SDGs) appointed by the United Nations or have the will to enter.

Invite Mr. Virgil Hawkins, Associate Professor, Osaka University Graduate School to Facilitator, and have the program be carried out with advice to PCY members.

Health and medical issues is one of the most important themes in realizing a sustainable world, and focuses on medical problems in the world and builds a mechanism to solve problems.

Health and medical issues is one of the most important themes in realizing a sustainable world, and focuses on medical problems in the world and builds a mechanism to solve problems.

Japanese students and international students are divided into mixed groups and group work is conducted.

In addition to advice for program execution, we talked about PCY hands-on story to fellows with past year’s graduates of PCY.

Project introduction

08 PCY 2018 [9/6 - 9/8 group work program]

Domestic students and overseas students gathered together to talk about SDGs goal 3. For international students, international students from Asia (China, Mongolia, Bangladesh) 4 people, Europe (Spain / France), Africa 4 people (Mari, Congo, South Africa) participated. First of all, the representative who was decided as a ice break as a janken prize game announced the name of each group member, the country of origin of the international student, the introduction of the Japanese student's school and so on.

In the group work, as a theme setting, the team submitted three themes. Eventually polution air pollution / traffic laboratory trouble / labor problem / Nutrition nutrition / HIV aids AIDS problem / high technology advanced technology / gender gap Gender gap and others are taken up as a theme "Issue: why is it important? From the viewpoint of "How is itrelevant to peace? Relationship with peace?" From the viewpoint of the group, representatives of the team pasted on the white board using tags.

1, HIV / AIDS rate 3rd place HIV solution problem in Botswana
2, Problems of Alcoholism in Teenagers in the UK
3, Air pollution problem in Mongolia

We decided to proceed with the theme of 3 themes.

Project introduction

On September 7th, the second day of the program, we will move the venue to Hotel Fukuratia Osaka Bay and close to the heart of the program.
On this day, the group was united towards the main forum, and we decided to stay at the venue so that we could have more rich communication. The students look seriously and will work on creating a continuous action plan from the previous day. Although it was until 22 o'clock in the preset time schedule, it seems that the group continues discussion with each other until late at night in the training room, even after the scheduled time, carefully finishing the action plan It was done.

Project introduction

09 PCY2018 [9/9 SDGs × PCY Forum 2018]

Break Through Osaka 2018 SDGs as a part of EXPO × The PCY Forum was held at the Knowledge Theater. At the opening remarks by Vice President Takahashi, we explained the history of PCY and the purpose of holding it, inviting the Pope Dalai Lama to commemorate the 2010 JCI World Congress.

Next, Professor Virgil Hawkins who served as a facilitator keynote on the problem of SDGs involving the world. Later, PCY participating students will have three themes, “Let’s reduce underage alcoholism in VR” “Stop excavating in Botswana HIV infection” “For the healthy life of children in Mongolian country gel district, Reducing health damage caused by pollution “was announced. As we announced this action plan, we asked many participants “The presentation of the students was very good” and “I was able to deepen my learning about the problems of the world” etc. I got the comment of.

Finally, Yamamoto gave a closing remarks with thanks to the review on the three points of the presentation about the points that were good and the points that can be brushed up.

Project introduction

10 PCY2018 [9/9 PCY2018 completion ceremony]

The ceremony ceremony was held in Sakura Internet Event Space. For a long time, I gave a bouquet of bouquets to Professor Virgil Hawkins who instructed me. In addition, participants from previous years' PCY program gave encouragement words to participating students.

Then Yamamoto committed the student a certificate of completion. Also at the closing remarks, Yamamoto vice chairman explained to the students that they wanted the students to look back on the program and become a human resource who has passed through in the future.

Also I gave a word of gratitude from the students for gratitude and gratitude to the preparation and further I would like to work on in the future. From the students I got an encouraging announcement that I would like to start a business or cherish these friends who care for me carefully.

Achievement report

01 PCY2018 Action Plan

For the action plan announced for the realization of world peace that students can do, we did not end only with students, but the punctuated human resources conducted a forum to influence the behavior of citizen's people . For students as well, presenting at the well-equipped venue in front of many audiences leads to motivation and increased awareness of the forum for the students while being overwhelmed by the presence of the place.

In the P group, we announced that “VR will reduce minor alcohol poisoning”.
In developed countries, the age of alcohol intake is low. In particular, students in Northern Europe tend to be alcoholic due to stress due to domestic problems, pressure from the surroundings and curiosity, sprouting self-reliance, many have become social problems.
Therefore, the P group announced to recommend that school expo and workshop be done once a year to conduct educational activities on alcoholism against junior high and high school students. As a content, we will first attract customers by distributing brochures for parents and booths and quizzes. Then, by simulating the influence of alcohol on the human body through the VR image, you will feel the dangers of alcohol. In addition, we will use questionnaire on understanding and awareness for effect measurement, and we will seek cooperation with local companies and local school staff in maintenance management.

C group has set the objective to reduce the transmission of young people's HIV / AIDs in poor areas in urban areas of Botswana, entitled "Stop excavating in Botswana HIV infection".
At present, about 37 million people in the world have HIV, and in 2017 about 1 million people are killed by HIV infection. On the other hand, the treatment method is not completely established. SDGs Goal 3.3 aims to eradicate HIV by 2030, but in Botswana there are 360,000 HIV-infected people, 21% of the population. Actually there are even more terrible areas, but as a result of taking safety into action, we decided to take action in Botswana, Africa. The C group entitled "African Idol Project" for this project, to do a summer project in Gaborone for a week, to have a song including a message about HIV targeted to young people aiming for a local singer at the music festival As a result, we announced that we can sustainably realize a society where young people can dream by raising their awareness about the prevention of HIV infection by local people and disseminating it to the world as a Botswana artist.

The Y group presented an action plan to alleviate health damage caused by air pollution for the healthy living of children in the Gel District of Mongolia.

SDGs Goal 3.9 states that by 2030 the number of deaths and illnesses due to air pollution etc. will be greatly reduced. Especially the gel district of Mongolia is the most air polluted area in the winter in the winter, and although countermeasures have been struck up to now, there is a current situation that effective countermeasures have not been taken on the current situation. Therefore, the Y group announced an action plan to distribute the air washer to the school so that it is not affected by air pollution even while the child is in school. Every summer we held a popular basketball tournament, raised the awareness of those who gathered people and funds, and created a sustainable mechanism by doing it on a continuous basis.

Achievement report

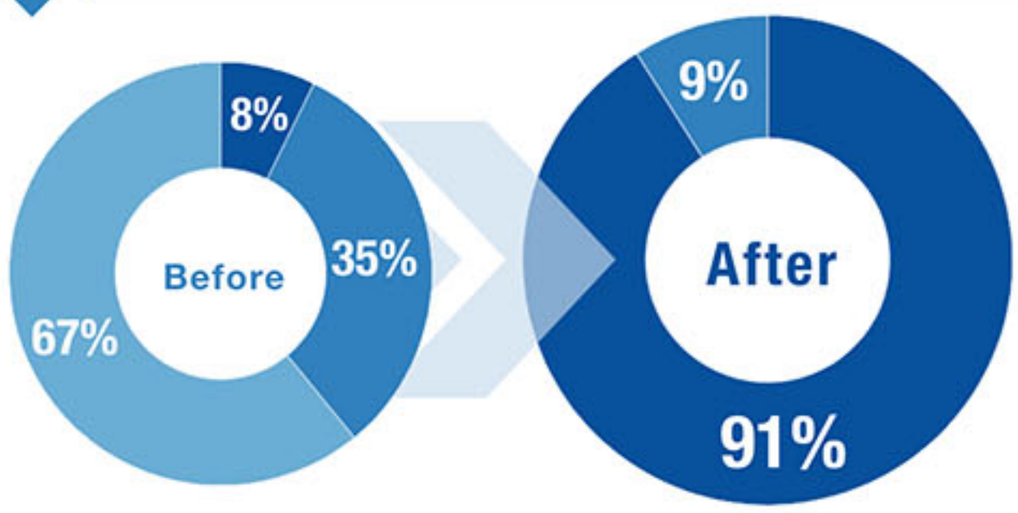

02 Questionnaire / consciousness survey result

- Change in consciousness before and after project implementation by PCY2018 participating students -

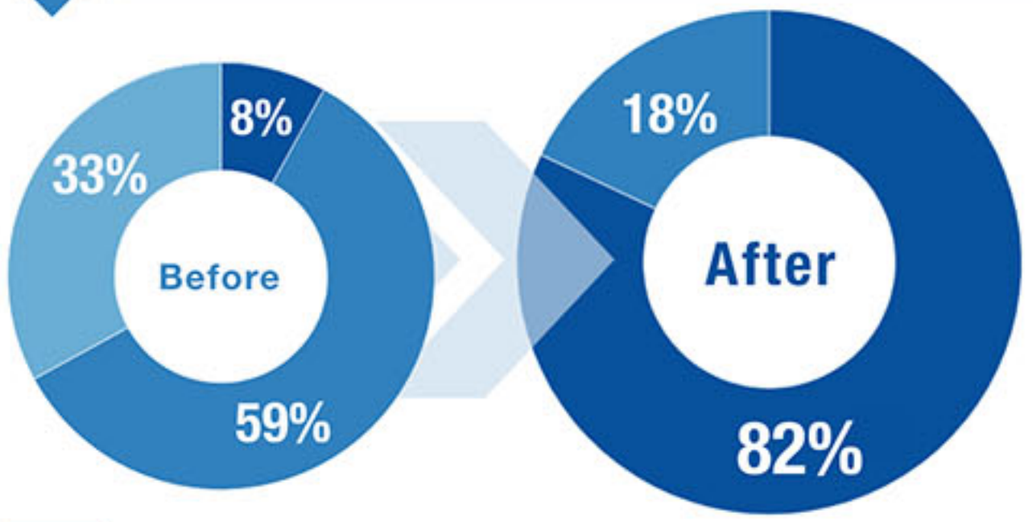

In the pre- and post-questionnaire surveys conducted for students 'awareness survey, it was confirmed that the participants' viewpoints on various problems of the world, technological innovation, and ideal future image were particularly increased, before and after the PCY project confirmed.

excellent good average below average poor

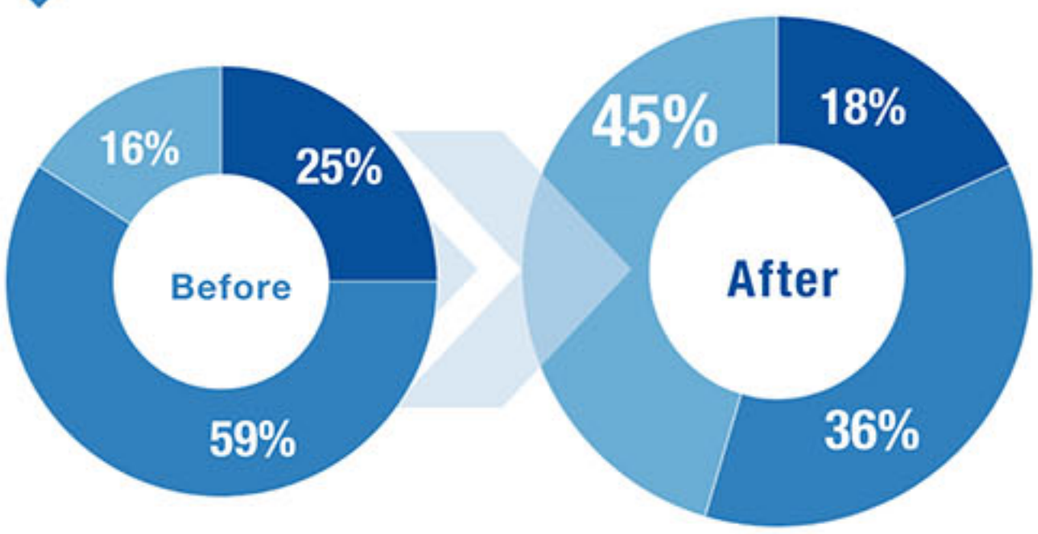

1 Be interested in various problems occurring in the world

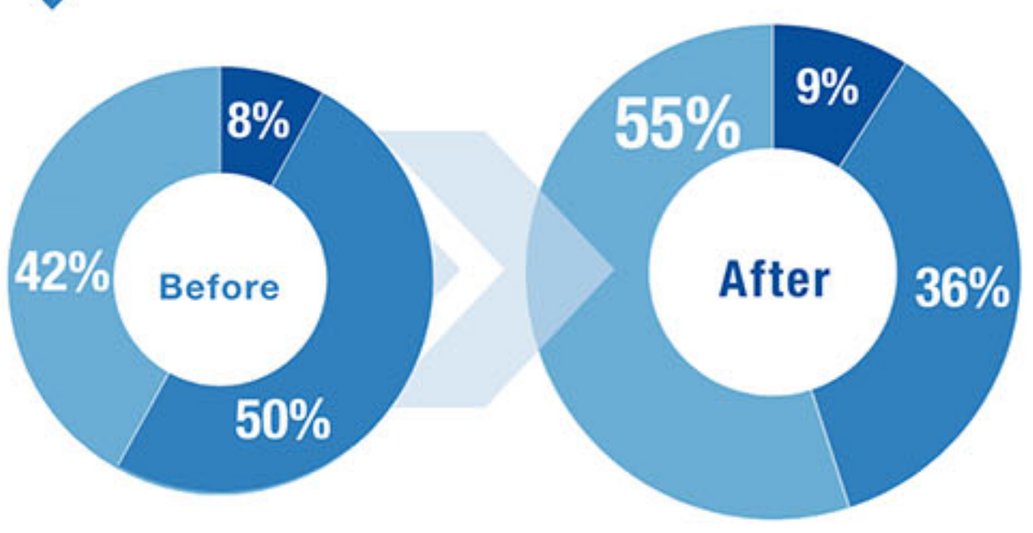

2 I have thought about the influence that various problems occurring in the world have on my own life

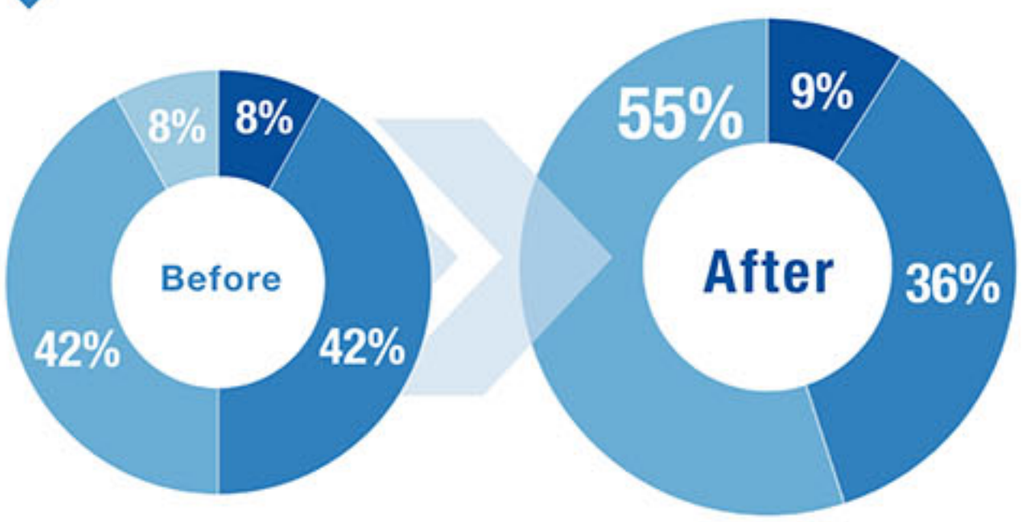

3 There is something I want to do for the future

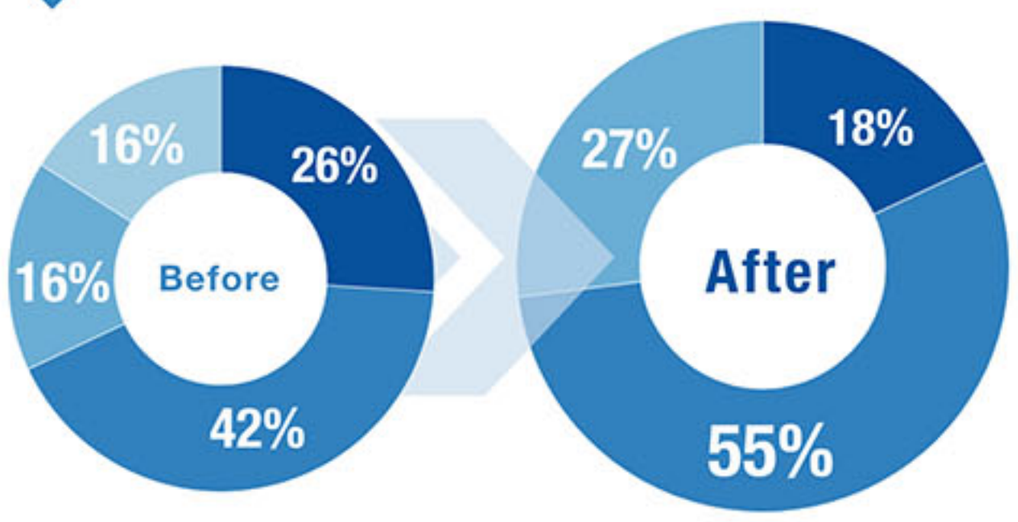

4 There are times when I want to improve the bad part of the world now

5 There are times when I think about the ideal future image of the world

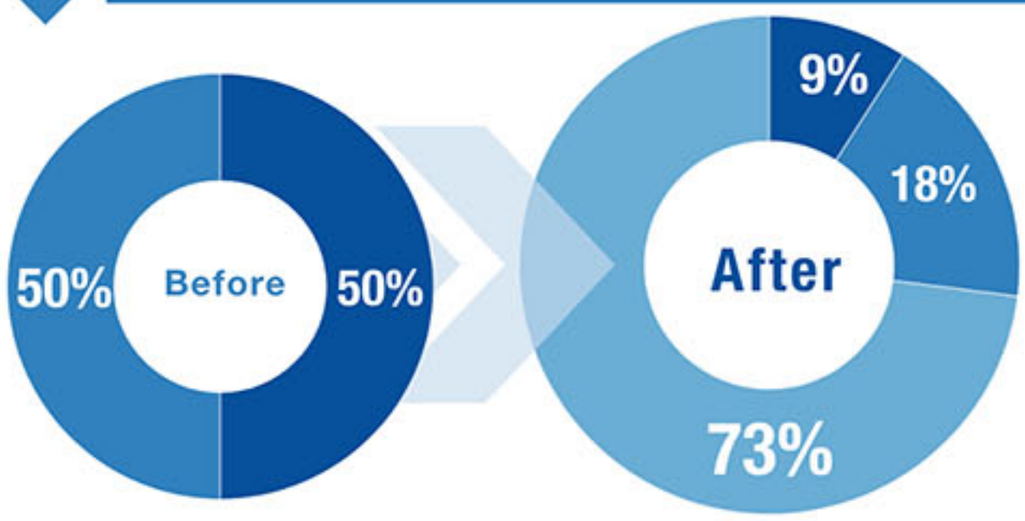

6 I can draw out the power of others and produce results as a team

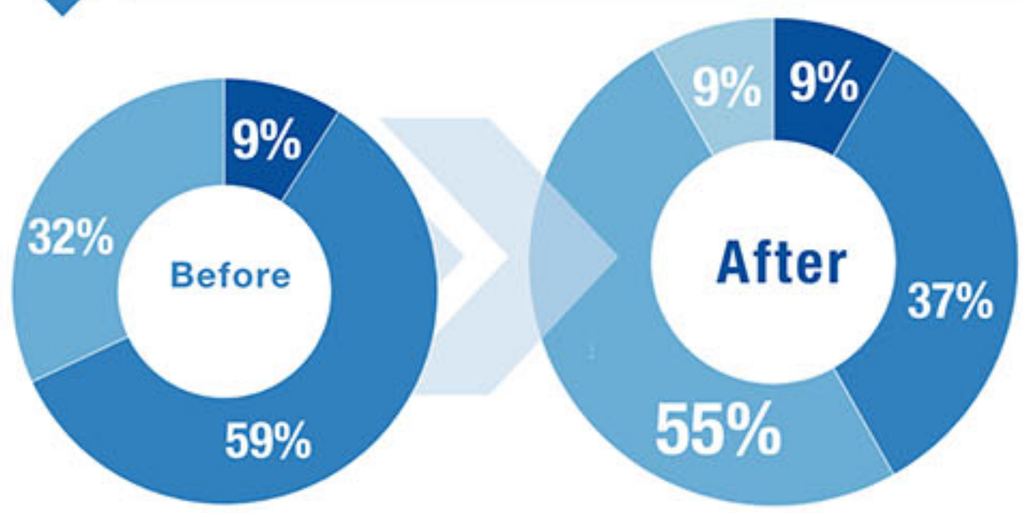

Achievement report

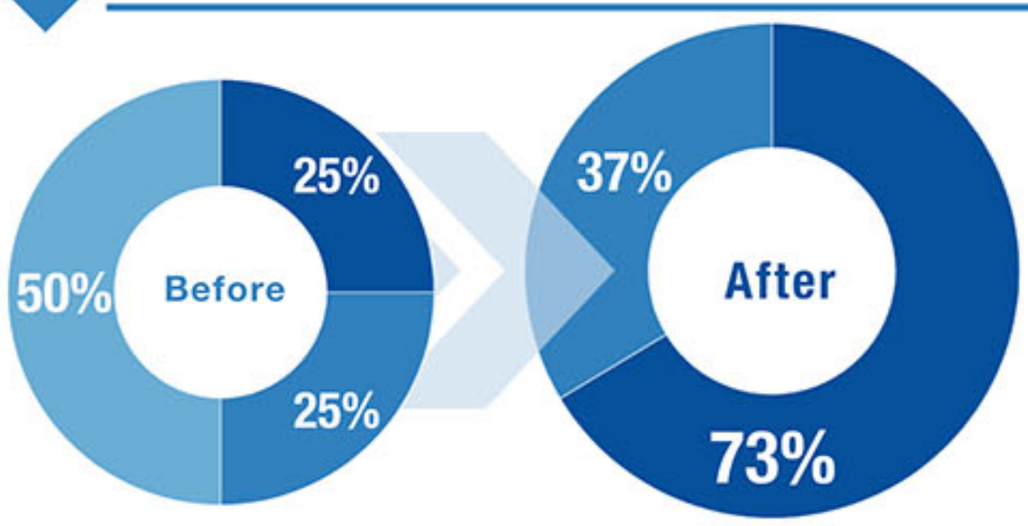

7 I am interested in the way people are behind technological innovation

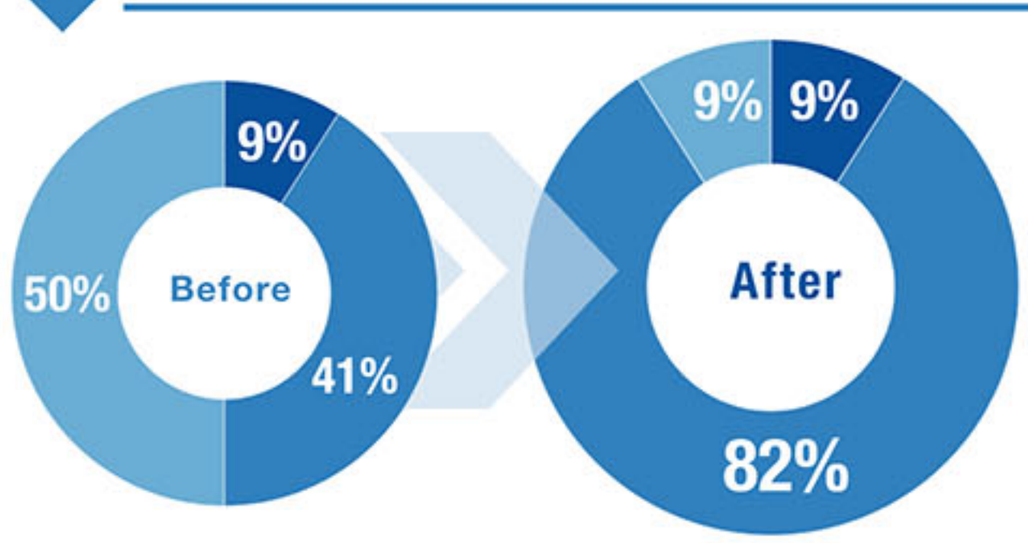

8 I understand the values of the same generation (people who create the next generation together)

9 There is consciousness that they are themselves to create the future of the future

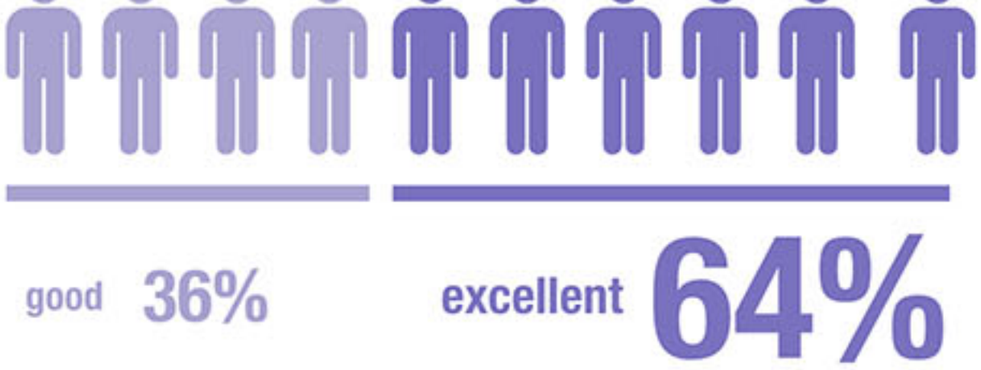

10 I want to actively act to make my home country and the world better

- Questionnaire after joining the PCY & SDGs forum -

1 Have the motivation to realize “a future that brings richness both materially and spiritually” has increased?

2 Have the motivation to apply for the UN Young Leader increase?

Achievement report

3 If you have any other opinions or questions, please feel free to write.

• I was able to learn a lot. Beginning with PCY, Thank you very much for all of JC who is running such a program.

• Thank you very much for giving me such a program this time.

• This forum was a form that I thought about theming from the beginning, so there were many scenes that needed power, but I felt a sense of fulfillment that I felt a sense of accomplishment and a good experience of completing it to the end I think that it was. I would like to do my utmost to make the experience connect to the next value in the future.

I have been indebted to various with PCY program since April. Thank you very much.

I realize that what I learned with PCY has brought many changes to me both mentally and thoughtfully. About “PEACE” It is the first time I have thought through SDGs goal 3, how do people around the world think about it, what kind of problems are there in the world, and what kind of problem We gave the opportunity to firmly think what to do.

• I would like to keep doing my best to make use of what I learned at PCY in the future. Thank you very much.

•Through semi - annual programs I have learned a lot and I have found new goals. I was able to feel a change in consciousness and attitude toward my future with lectures, group work, overseas training, training camp, none of the usual experiences I can usually do. I will make use of this experience not only for 4 years of my future university life but also when I get a job.

•I also realized the importance of going out from the usual environment and meeting new people and things, I am very confident in my experience of participating in the PCY program. I would like to challenge a lot of new things in the future. Thank you very much for giving me a precious experience.

Achievement report

Voice of participating students

• I experienced a lot of stimulation by having a new experience with overseas programs and communicating with students with completely different backgrounds.

• Indeed I was able to learn more about the current state of the gel district of Mongolia as we advance this program. Knowledge of these serious current conditions in other countries has further raised awareness to realize “the future that brings richness both materially and spiritually”.

• I think that Japan is already rich in material terms, but I think that there is still a problem mentally. In order to solve the various problems, I also want to contribute in some way in the future. I think that it seems that it seems to be touched by the talented students of the same generation in this program. I would like to continue this network in the future.

• About the “Health and Welfare to All People” Targeted for PCY This time I felt I had no confidence and adequate knowledge at first, but for the time being to realize a prosperous future, for the time being about the world problem I realized again that I understood and moved it to action.

•Through thinking about the SDGs goal 3 of the United Nations, we felt that the balance between material elements and spiritual things is very important for a rich life. My team has announced an action plan on HIV infection but it also can not ignore the cultural and human aspects of people in Africa. In this forum, I was made to think about what is usually forgotten as usual.

• In the present era, many industrial countries rich in materials are spiritually rich, but many cases are not so, I think that the reverse is also true. However, I realized that it is possible to cause a big INNOVATION by moving each young generation of PCY, who is responsible for the future, by each person.

•In this time, considering the action plan toward SDGs goal 3, we were able to learn again what kind of future we should aim for in the future.

•I encountered people who have various backgrounds that I would like to challenge the world with ideas and listen to various opinions so that I will focus on what is going on in the world than before and interest in the UN Young Leaders Has increased.

•I have not known about the United Nations Young Leader until now, but now I feel familiar. I would like to consider applying if I can grow more from now.

Record - Facilitator Introduction

Associate Professor, Graduate School of International Public Policy, Osaka University

Virgil HAWKINS

Specializing in international politics / conflict research (especially Africa) · media research. Looking to the existence of “a world not covered” in the world where information communication technology develops and free information dissemination, we will devise effective policies against various problems the world has from the viewpoint of media and coverage Study the flow of information. AMDA Zambia Representative / Advisor · Zambia Open University After a part-time lecturer, he is currently teaching at Osaka University Graduate School.

Comments from the facilitator

This year’s PCY covered health and medical issues, but it was impressive that many opportunities to learn and think about this problem were prepared from various angles from participants before tackling the action plan leading to problem solving did. The problems faced by developed countries can be seen in the field, and also through Asia and Africa through the Skype conference. I felt that this experience did not lead to a realistic action plan that captured the essence of the problem.

Compared to the past, the time we were able to prepare the action plan was limited this year, each group worked diligently, overcoming that hurdle with teamwork and concentration ability, high quality action in a short time I would like to evaluate that the plan was made. The issue of HIV / AIDS, youth alcoholic poisoning, and air pollution problems were picked up in PCY this time, but the countermeasures each group reached are innovative and interesting, and we were able to explore the plan to details. I am expecting the future of PCY members this year.

At the PCY Official Site of 2018, we regularly offer recruitment and business introductions as usual, and actively disseminated information on activity report contents.
In addition, we conducted real-time distribution on the official website so that people outside the venue can see the virtual conference that we conducted as a new attempt in this fiscal year.

- Public relations activities on Facebook page -

https://www.facebook.com/PeaceConferenceOfYouth/

On the Facebook page, we appealed outside the body with a wide range of contents including dissemination of business outline, explanation of SDGs goal, call for recruitment of students, transmission of the state of business day.We posted images and videos effectively, and we noticed a more effective approach,not mere information

dissemination, such as utilizing event announcement page for business announcement.
We have continued to use the Facebook page of PCY since fiscal 2010, but achieved 16,000 in this fiscal year. It is confirmed that net increase of about 1,800 nice can be confirmed by this year alone, and public relations activities using Facebook are effective enough.
